Technology that earns a profit

Norwood, MA Unlike the successful Norwood, Mass web hosting company, E-List.Net, a lot of promised innovations have not come to bear fruit. The technology vaporware includes items like the computer on the flight deck of Star Trek that was supposed to fully understand human speech and synthesize its answers in a melodious smooth human voice, a magnet driven high speed transporter vehicle that were to cruise our cityscape, and human travel to Mars. But today there is a new service oriented web hosting company that provides custom services to a wide variety of businesses and non-profits. "I love the remote Outlook web accessed email/calendar that E-List set up for me – I can access my email and schedule from home or anytime I am on the road, says Jennifer Peck, a long-term customer.

A web business that makes money for its customers

The business models for web hosting companies were sure bets during the dot com gold rush. Lots of our expectations have been dashed since the crash of the tech market, but it mostly left the small business wondering about the stability of their e-presence. Certain surprising features dot our e-landscape, namely that there are strong local, regional and national players in the hosting and ASP field that are not only surviving but thriving. Whilst Exodus, @Home and other hosting behemoths are dot bombed, E-List.Net is humming right along with a unique set of offerings for its customers - namely flexibility – along with hosting, email, remote email, programming, ASP services, dedicated and co-location hosting. Who enjoys these products of E-List.Net? For profits, non-profits, and a host (pun intended) of other small to medium sized businesses in-between.

New online ventures love dedicating servers at the E-List.Net facility in Norwood, MA. Partly they like the price - hundreds less than the competition. But they also like the skilled services that are available for much less cost than the hiring of their own staff. The standard website customer is ecstatic that they can enjoy bursts of fat pipe connectivity - joining the redundant connections to the Internet when they get a swarm of visitors to their server.

They cater to all types of businesses

From an individual author who is selling books to unique online applications for the new digital age, all for as low as \$8.95 each. From small companies to the largest for profit behemoth – they all seem comfortable with their secret delivery of refreshing personal

service. What is their secret? They are a non-VC funded high tech operation that provides all its services in-house at E-List's own data center.

Human answered phones

Unlike the computer in Star Trek and the magnetron trains and the humongous datacenters long dark, E-List is there when their customers call to ask a question and fill in for corporate IT personnel, bring web artists to bear and offer entrepreneurial suggestions for interactive web design and search engine optimization - all without sky high prices to pay back an anxious vulture capitalist. And while juggling these tasks they also manage to answer the phone in person. Even Hal couldn't do that.

About E-List.Net
